ASO-Hunter Internal Tool Documentation

Technical and Functional Overview for Google Ads API Compliance Review

Tool Name:	ASO-Hunter (ASO Analytics & Optimization Platform)
Google Ads Manager Account:	426-563-8342
Google Cloud Project Number:	461645916998
Developer Token:	qeT_1X7GuZvCYFnpmfeEbg
Application Environment:	Internal In-House Dashboard (Private / Restricted Access)
Primary API Method:	KeywordPlanIdeaService.GenerateKeywordIdeas (v25)

1. Executive Summary & Purpose

ASO-Hunter is a proprietary, in-house analytical software developed by our mobile application publishing team. The tool is designed to monitor, analyze, and optimize App Store Optimization (ASO) metrics for our self-published mobile wellness and productivity applications on Google Play and Apple App Store.

The primary goal of integrating the Google Ads API is to evaluate real-world user search volume and keyword demand via Google's `KeywordPlanIdeaService`, helping our marketing and product teams identify relevant, high-demand, and non-saturated search queries to include in mobile application titles, subtitles, and descriptions.

> **Audience & Compliance Notice:** This tool is strictly restricted to internal company staff (mobile marketing managers, ASO specialists, and data analysts). It is not offered as a commercial SaaS, not distributed to external clients, and no data retrieved from the Google Ads API is ever resold, distributed, or exposed to third parties.

2. Google Ads API Usage & Technical Integration

Our integration relies exclusively on read-only keyword planning capabilities:

- **Service:** `KeywordPlanIdeaService`
- **Endpoint Method:** `customers/{customer_id}:generateKeywordIdeas`
- **Scope:** `https://www.googleapis.com/auth/adwords`
- **Input Parameters:**
  - `language`: target storefront language (e.g., `languageConstants/1000` for English, `1031` for Russian).
  - `geoTargetConstants`: target country criterion ID (e.g., `geoTargetConstants/2840` for United States).

  - `keywordPlanNetwork`: `GOOGLE_SEARCH`
  - `keywordSeed`: the list of mobile application search queries currently tracked by our team.
- **Retrieved Data:** Monthly average search volumes (`avgMonthlySearches`), competition index, and related keyword ideas.

3. Architecture & Data Flow

4. User Interface Demonstration (ASO-Hunter)

Below is a representation of the internal user interface where Google Ads API search volume data is displayed alongside mobile app rankings:

KEYWORD TERM	GOOGLE SEARCH VOL	ASO POPULARITY	DIFFICULTY	APP RANK	STATUS
cbt thought diary	8,100 / mo	POPULARITY: 54	DIFFICULTY: 45	RANK #1	Targeting metadata
mental health tracker	14,200 / mo	POPULARITY: 67	DIFFICULTY: 52	RANK #5	Under review

5. Security & Privacy Safeguards

- **Authentication:** All requests utilize standard Google OAuth 2.0 with secure offline refresh tokens stored in encrypted environment variables.
- **Data Retention:** Only aggregated metric numbers (monthly volumes) are stored in our private relational database for tracking historical trends.
- **Confidentiality:** No personally identifiable information (PII) is involved in keyword planning queries.
